

Promo Code Module — QA Report

Admin setup + frontend redemption — full exhaustive test pass

Admin under test: <https://jt-admin.scopethinkers.com/PromoCode/Index>

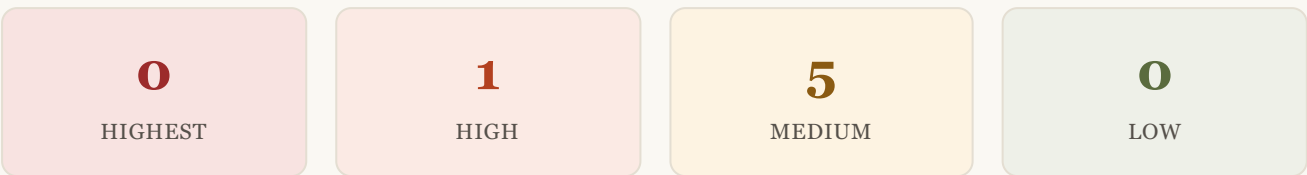

Frontend under test: <https://jt-frontend.scopethinkers.com/>

Test account: qatest_promo_20260721@mailinator.com

Jira project: JP3P — "JT Phase 3- Part 3"

Report date: 21 July 2026

Severity Breakdown

Overall Verdict

Needs fixes before release — no blocking (Highest-severity) defects were found; checkout math, negative-path rejections, and actual financial records are all correct. However, 6 confirmed bugs (1 High, 5 Medium) should be fixed first, in particular JP3P-111 (wrong "Amount Paid" shown to paying customers) and JP3P-112 (no promo-code traceability in financial reports for auditing).

Full Test Results

Test ID	Description	Result	Jira Ticket
P1	Create QATEST_PERCENT10 (10%, future expiry, limit 5, all courses)	Pass	—
P2	Create QATEST_FLAT100 (₹100 flat discount)	Pass	—
P3	Create QATEST_MINORDER (min order ₹500, 15%)	Pass	—
P4	Create QATEST_SINGLEUSE (usage limit 1)	Pass	—
P5	Create QATEST_NOEXPIRY (no expiry)	Pass	—
P6	Create QATEST_SPECIFICBATCH (course-restricted)	Pass	—
P7	Edit QATEST_PERCENT10 10% → 15%	Pass	—
P8	Enable/disable toggle	Pass	—

N1	Duplicate code name rejected	Pass	—
N2	Empty code name rejected ("Code is required.")	Pass	—
N3	Discount = 0 rejected	Pass	—
N4	Discount over 100% rejected	Pass	—
N5	Negative discount rejected	Pass	—
N6	Past expiry date accepted with no validation; listing shows "Active"	Fail	JP3P-107
N7	Non-numeric discount input blocked	Pass	—
N8	Special characters in code name — stored verbatim, unsanitized (noted; not confirmed exploitable)	Pass (note)	—
N9	Max Total Redemptions = 0 accepted; ambiguous bare "o" in listing	Fail	JP3P-108
E1	Numeric-only code QATEST_12345 accepted	Pass	—
E2	Code > 50 characters triggers raw unhandled DB exception	Fail	JP3P-109
E3	Mixed-case code normalized to uppercase on save (by design)	Pass	—
E4	100% discount code created successfully	Pass	—
E5	Same-day expiry valid through end of day (confirmed on frontend)	Pass	—
P9	Search for "QATEST_" in listing	Pass	—
P10	Column sort (Code, Status) — clicking headers does not reorder rows	Fail	JP3P-110
P11	Pagination shows different records on page 2	Pass	—
P12	Export list	N/A	No export feature exists
P13	Delete QATEST_NOEXPIRY, confirmed gone from list and search	Pass	—
N10	Cancel delete confirmation — code not deleted	Pass	—
P14	Create test account qatest_promo_20260721@mailinator.com	Pass	—
P15	Promo code field present at course checkout	Pass	—
P16	QATEST_PERCENT10 — 10% discount math correct	Pass	—
P17	QATEST_FLAT100 — ₹100 flat off correct	Pass	—
P18	QATEST_SINGLEUSE — first use succeeds	Pass	—
P19	Remove applied promo — original price restored	Pass	—
P20	QATEST_SPECIFICBATCH applied on its assigned course	Pass	—
P21	Invalid/nonexistent code rejected cleanly, no crash	Pass	—
P22	Expired code (QATEST_EXPIRED) rejected at checkout	Pass	—
P23	Disabled code (QATEST_FLAT100) rejected	Pass	—
P24	QATEST_MINORDER rejected below minimum order value	Pass	—
P25	QATEST_SPECIFICBATCH rejected on a different batch	Pass	—

P26	Empty promo field + Apply handled gracefully	Pass	—
P27	Special characters / SQL-injection strings handled safely	Pass	—
P28	QATEST_SINGLEUSE second use rejected (verified via real purchase)	Pass	—
E6	Double-apply of same code not doubled	Pass	—
E7	Case-insensitive match at checkout, consistent with admin normalization	Pass	—
E8	Browser back/forward after applying a code — clean reset, no stale state	Pass	—
E9	Promo on an already-discounted (sale-price) course	Untestable	No sale-price mechanism found
E10	100%-discount checkout: total correctly ₹0, but confirmation page shows wrong Amount Paid	Fail	JP3P-111
E11	Usage-limit boundary (5-then-6th rejected)	Partial	Redemption-count increments verified correct; full 5-then-6th cycle not exhausted
C1	Admin usage count increments correctly after frontend redemption	Pass	—
C2	Discounted amount recorded correctly in GST Report (not full price)	Pass	—
C3	Student purchase history shows discounted price	Untestable	No order/purchase-history page exists on frontend
C4	Promo code name traceable in admin order/financial records	Fail	JP3P-112

Confirmed Bugs — Detail

JP3P-107 — Expired promo code saves and shows "Active" status

MEDIUM

Test: N6 | Code: QATEST_EXPIRED | Admin-side validation/display gap

A promo code saved with a Valid To date already in the past is accepted with no warning, and the listing Status column shows "Active" despite the expiry having passed. Frontend checkout correctly rejects this same code as expired (P22) — so there is no real bypass, but the admin listing misleads anyone auditing live codes.

JP3P-108 — Max Total Redemptions = 0 accepted; ambiguous display

MEDIUM

Test: N9 | Code: QATEST_N9_TEMP | Listing row: "10% OFF · All courses · No expiry · 0 · Active"

Max Total Redemptions = 0 is logically meaningless but is accepted with no validation. The listing then displays a bare "0," visually indistinguishable from "unlimited" or a genuine small quota, making broken codes hard to spot.

JP3P-109 — Codes over 50 characters trigger a raw unhandled DB exception

MEDIUM

Test: E2 | Boundary confirmed: 50 chars succeeds, 51 chars fails

Exceeding the database's 50-character nvarchar limit by even one character produces the raw dialog "An error occurred while saving the entity changes. See the inner exception for details." instead of a clean max-length validation message — exposing internal Entity Framework/SQL details to admin users.

JP3P-110 — Column sorting on the Promo Code listing is non-functional

MEDIUM

Test: P10 | Columns affected: Code, Status

Both columns advertise sortability (sort arrows, ARIA "activate to sort" labels), but clicking either header produces no change in row order whatsoever.

JP3P-111 — Payment Success page shows wrong "Amount Paid" for a 100%-discount purchase

HIGH

Test: E10 | Code: QATEST_100PCT | Course: GST Exclu (₹150) | Purchase #6786

Checkout correctly computed Total = ₹0 and skipped the payment gateway entirely (Transaction ID "#FREE_ENROLLMENT"), and the backend Course Purchase GST Report correctly records Total = ₹0.00. However, the customer-facing Payment Success page displays "Amount Paid: ₹150.00" — the original pre-discount price — directly contradicting both the checkout total and the backend record. No actual overcharge occurred, but the student's own receipt is factually wrong.

JP3P-112 — Promo code name not recorded/visible in any admin order or financial report

MEDIUM

Test: C4 | Report checked: Admin → Gst → Report → Course ("Course Purchase Gst Report")

The GST Report correctly shows the Discount amount for each purchase (₹315.00 and ₹200.00 for the two test purchases) but has no column identifying which promo code produced it, and no other admin screen fills this gap. Admins cannot audit which codes are driving which discounts without contacting the student directly.

Untestable Cases

E9 — No sale/already-discounted-price mechanism was found on any course, so stacking a promo code on top of an existing discount could not be exercised.

- C3** — The frontend has no student-facing order/purchase-history page at all (only a "My Courses" progress view and a "Coin History" page); there is nowhere to verify that a persisted purchase record shows the discounted price.
- E11** — Only partially exhausted: redemption counts were confirmed to increment correctly for two different codes (one real purchase each), but running a single code through all 5 allowed uses plus a rejected 6th was not completed, since each cycle requires a full real payment.

Cleanup Reference

Test account: qatest_promo_20260721@mailinator.com

Promo codes created during testing (all prefixed QATEST_ — safe to delete; does **not** include ANT0301 / COURSE _NOEXPIRE, which are pre-existing codes created manually by the requester and were left untouched):

QATEST_PERCENT10	QATEST_EXPIRED	QATEST_AAAA...A (50-char)
QATEST_FLAT100	QATEST_N7_TEMP	QATEST_SPECIAL !@#\$%
QATEST_MINORDER	QATEST_N9_TEMP	QATEST_MIXEDCASE
QATEST_SINGLEUSE	QATEST_ZERO_TEMP	QATEST_100PCT
QATEST_SPECIFICBATCH	QATEST_12345	QATEST_TODAYEXPIRY

QATEST_NOEXPIRY was created (P5) and then deliberately deleted (P13) as part of testing — already gone, no cleanup needed.
